PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building and shipping full-stack applications, backend services, and AI-powered systems end to end. Proficient in Java, Python, JavaScript, and TypeScript, with hands-on experience in React, Spring Boot, REST APIs, microservices, SQL and NoSQL databases, and cloud platforms (AWS). Built and deployed an autonomous LLM agent and other AI/ML projects, and works fluently with AI development tools. Strong foundation in data structures, algorithms, object-oriented design, testing, and Agile collaboration. Recently completed a Master of Engineering in Computer Science (GPA 3.917/4.00).

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C, HTML5, CSS3

Frontend: React.js, TypeScript, Redux, HTML, CSS, Bootstrap, Tailwind-style CSS, responsive single-page applications, reusable components

Backend & APIs: Spring Boot, FastAPI, Django, Node.js, REST API design and development, microservices, webhooks, JSON, server-side development

AI & ML: LLM APIs (Anthropic, OpenAI, Groq), agentic systems and tool use, Agno framework, prompt engineering, applied ML (scikit-learn, NumPy), AI development tools (Cursor, GitHub Copilot, ChatGPT)

Databases: PostgreSQL, MongoDB, SQL, NoSQL, relational database design, data modeling

Cloud & DevOps: AWS (EC2, S3), Docker, CI/CD (Jenkins, Argo CD), Git, GitHub, Grafana monitoring, Apache Kafka

Foundations & Practices: Data structures and algorithms, object-oriented design, design patterns, unit and integration testing, code reviews, Agile/Scrum, technical documentation

PROFESSIONAL EXPERIENCE

Full Stack Developer, Phenom

June 2022 to July 2024

Hyderabad, India

- Built and shipped full-stack features end to end using Java, Spring Boot, React, TypeScript, and SQL, owning work from design through deployment in Agile sprints.
- Designed and built backend services and a data pipeline (Apache Kafka, Apache Loki, AWS S3) with a Spring Boot query API, delivered as an enterprise feature adopted by clients including MERCK and Regions Bank.
- Developed React user interfaces and reusable components to query and visualize high-volume data, and consolidated multiple applications using Webpack module federation.
- Used AI development tools (Cursor, GitHub Copilot, ChatGPT) daily to accelerate delivery while validating output for quality and maintainability.
- Maintained CI/CD pipelines (Jenkins, Argo CD) and Docker-based deployments on AWS, and instrumented Grafana monitoring that cut average issue triage time.
- Collaborated cross-functionally with engineering, product, and stakeholders, participating in design reviews and code reviews and troubleshooting production issues.

Intern, Phenom

February 2022 to June 2022

Hyderabad, India

- Built an internal test and defect management tool in Python and Django that let users create test suites, run them, and track reports automatically, contributing to a 50% reduction in recurring defects across Phenom products.
- Developed 10+ reusable React and JavaScript UI components and supported backend API work, bug fixes, and Git-based collaboration within the Agile team.
- Participated in daily stand-ups, code reviews, and team meetings, communicating progress and technical feedback clearly throughout the 5-month internship.

Software Engineer, Integr8 Software Products & Services Pvt. Ltd.

May 2020 to December 2021

Hyderabad, India

- Built and maintained full-stack features over 1.5+ years using Java, Python, JavaScript, SQL, and REST integrations across multiple application modules.
- Developed responsive front-end interfaces (JavaScript, HTML5, CSS3) and reusable components, integrating them with REST backend services and JSON data exchange.
- Supported backend logic, database-driven functionality, and SQL queries for internal and client-facing systems.

- Diagnosed issues independently and with stakeholders, validated fixes, and delivered maintainable, well-documented improvements through testing, debugging, and release support.

PROJECTS

Flight Search AI Agent | Python, Agno, Groq (LLaMA 3.3), SerpApi, Streamlit [Live Demo](#)

- Built and deployed an LLM agent that answers natural-language flight questions by autonomously selecting among three registered tools (one-way search, round-trip search, cheapest-month lookup) and calling live Google Flights data via SerpApi.
- Defined the agent's role and tool-selection logic, implemented structured output and error handling, and managed secrets across local and cloud environments; deployed live on Streamlit Cloud.

AI-Powered Automated Code Review System | Python, FastAPI, LLM APIs, React, GitHub Webhooks [Project Link](#)

- Built a FastAPI backend and React interface that integrate LLM providers (Anthropic, OpenAI) and GitHub webhooks to analyze code changes and return structured feedback.
- Handled authentication and data flow across services and resolved integration issues spanning auth, data handling, and latency.

Open Source NPM Package (Reusable React Component) | React, TypeScript [Project Link](#)

- Published an open-source React and TypeScript component averaging 300+ weekly downloads, built with a modular, reusable architecture for plug-and-play integration.
- Designed the component for cross-project compatibility and clean bundling, enabling drop-in use in production web applications.

House Price Predictor | Python, scikit-learn, NumPy, React, Vite [Project Link](#)

- Built an end-to-end ML web app that trains a linear regression model on user-provided datasets to predict house prices, implementing feature scaling and stochastic gradient descent from scratch.
- Deployed the React and Vite frontend on GitHub Pages, enabling in-browser model training and prediction without a backend.

Software Load Balancer | Java, Socket Programming [Project Link](#)

- Built a Java load balancer using socket programming, round-robin routing, and health checks to distribute traffic only to healthy backend servers.
- Validated horizontal scalability by dynamically adding backend servers under load and confirming stable request distribution.

EDUCATION

University of Cincinnati

Master of Engineering in Computer Science

August 2024 to April 2026

Cincinnati, OH | CGPA: 3.917/4.00

Sreenidhi Institute of Science and Technology

Bachelor of Technology in Electronics and Communication Engineering

August 2018 to June 2022

Hyderabad, India | CGPA: 3.19/4.00

CERTIFICATIONS & ACHIEVEMENTS

- HackerRank Certificate of Accomplishment in Front-End Developer (React).
- Scored 76% in the Internshala Web Development assessment.
- Ranked in the top 3% statewide among 223,000 candidates in EAMCET 2018.

Languages: English, Hindi, Telugu, Urdu
