Work Experience

Full Stack Developer, Phenom | June 2022 – July 2024

- Developed a **distributed data streaming platform** using Apache Kafka for real-time event ingestion, Apache Loki for log aggregation and indexing, and AWS S3 for durable, scalable storage, capturing and processing large volumes of application and user data across multiple products, making debugging and incident analysis faster and more reliable for engineering teams.
- Implemented backend APIs with Java and Spring Boot and a React-based UI to **query, filter, and visualize log data** by time range, improving day-to-day developer productivity.
- Shipped the solution as an **enterprise data platform feature** adopted by customers such as **MERCK and Regions Bank**, supporting a **\$25K subscription offering**.

Intern, Phenom | February 2022 – June 2022

- Built reusable React components and an internal test management system using Python and Django to **track test and defect data**, helping reduce recurring defects by **~50%**.
- Collaborated in agile development processes including sprint planning, daily stand-ups, and code reviews while contributing to frontend and backend features.

Education

Master of Engineering in Computer Science | University of Cincinnati | CGPA: 3.917/4.00 | August 2024 – April 2026

Bachelor of Technology in Electronics and Communication Engineering | Sreenidhi Institute of Science and Technology | CGPA: 3.19/4.00 | August 2018 – June 2022

Skills

Languages: Python, Java, C, HTML, CSS, JavaScript, TypeScript, SQL

Developer Tools: VS Code, Eclipse, Git, GitHub, IntelliJ, Postman, Agile Environment, Grafana, ArgoCD

Technologies / Frameworks: React.js, Django, FastAPI, Node.js, Spring Boot, Maven, Bootstrap, Jenkins, Junit.

Software Architecture: Single Page Web Applications, Module Federated Applications, Microservices Architecture

Databases: MongoDB, PostgreSQL

AI Skills: LLM APIs, AI orchestration, inference pipelines, NumPy, scikit-learn, TensorFlow, PyTorch

Coding Concepts: Data Structures and Algorithms, Object-Oriented Programming (OOP), RESTful Web Services, JSON

Projects

AI-Powered Automated Code Review System – [Project Link](#)

- Deployed a **FastAPI backend integrating multiple LLM providers** to automatically review pull requests, creating a flexible layer that lets users choose different AI models while handling code diff analysis and AI orchestration, helping reduce manual review effort and improve code quality.
- Developed a system that **captures GitHub pull request events using webhooks and GitHub Apps**, along with a React UI that enables seamless repository onboarding and delivers real-time inline AI feedback, speeding up review cycles and improving developer productivity.

Open Source NPM Package (Comments Section) – [Project Link](#)

- Published an open-source React component with 300+ weekly downloads, enabling plug-and-play comment functionality for production applications.
- Implemented a reusable and modular architecture using React, TypeScript, and Webpack to ensure cross-project compatibility.

Software Load Balancer – [Project Link](#)

- Developed a software-based load balancer using Java socket programming with round-robin routing and real-time health checks.
- Implemented fault detection and traffic routing mechanisms to improve reliability and ensure high availability.
